1 Introduction

This specification mainly introduces the PTZ function section of ISAPI Protocol.

2 Conformance

All of interface definition in this specification is consistent with that of ISAPI protocol, the specification is a part of ISAPI protocol. The architecture, glossary and relationship are consistent with ISAPI IPMD documentation.

3 Glossary and Relationship

3.1 Glossary of Terms

- **PTZ channel** = PTZ channel is the basic unit of PTZ functions, and a PTZ channel corresponds to a PTZ control unit.
- **Absolute PTZ** = PTZ control unit that supports absolute PTZ. Absolute positioning can designate horizontal angle, vertical angle and lens range.
- **Relative PTZ** = PTZ control unit that supports relative PTZ. The parameter of relative positioning is an increment, which relates to the current position of PTZ and can be an increment in the horizontal direction, or vertical direction, or increment of lens distance.
- **Continuous PTZ** = PTZ control unit that supports to configure PTZ control speed, the parameter is speed of PTZ.
- **Momentary Move** = this part is the extension of Continuous PTZ function. The running time can be specified in the command and PTZ movement will stop when reaching the specified time.
- **Preset Point** = Moving to a position can be marked as a preset, the preset includes the following parameters: horizontal direction, vertical direction and lens distance, etc.
- **Patrol** = Patrol is a collection of a series of preset points; the path of patrol will be in order of presets.
- **Home position** = Special preset.
- **PTZ limitation** = Limit the range of PTZ movement. The up, down, left and right border can be specified.
- **PTZ Time Task** = Support to set time and task to PTZ unit.
- **PTZ auxcontrol** = PTZ auxiliary function, including light, rain wipers and heat lamp.
- **Digital PTZ** = Digital PTZ is not really used to control mechanical

movement; it is generally based on a large resolution, and displayed images in electronic PTZ is a part of the original images obtained by sensor.

3.2 Basic PTZ space type XML

The definition of PTZ space: “X” represents the horizontal direction; “Y” represents the vertical direction, “Z” on behalf of lens distance. A few basic variables will be introduced in this section.

```
<Min><!--xs:integer--></Min>
<Max><!--xs:integer--></Max>

<XRange>
  <Min/>
  <Max/>
</XRange >

<YRange>
  <Min/>
  <Max/>
</YRange >

<ZRange>
  <Min/>
  <Max/>
</ZRange >
```

4 PTZ Service and Resources

Back-end devices support multi-channel PTZ, but front-end devices only contain 1-ch PTZ. For different PTZ channels, capability is a little different.
